EVOLUTION

GROHE installation systems are a long-standing tradition within the brand's portfolio, offering 50 successful years of developing true hidden champions. Facilitating versatile and fuss-free installation, they simplify the daily work of professionals worldwide. And although GROHE's reliable sanitary systems disappear behind the wall, they enable consumers to design their dream bathroom; from stylish wall hung ceramics to smart shower toilets and sophisticated flush plates.

A HIDDEN CHAMPION

The latest and most advanced of GROHE's installation systems, Rapid SLX has been designed to fit all rimless WCs and shower toilets. Plus, with its integrated flow manager, it takes just a few seconds to adjust the flush - without any disassembly. Not only can the system support standard WCs but thanks to the integrated water and power connections, a shower toilet can also be easily installed at a later date, providing a truly future-proof solution.
